

Final Project:

“How To Build A Bot” Tutorial

Assignment description:

- choose a website/platform or a social media app.
- research some tutorials for scraping and/or creating a bot for that app. Make sure the tutorial is recent (in the last year, at minimum).
- with a partner or by yourself, create a tutorial that you will use to teach your classmates how to scrape or create a bot that makes use of that website or app.

Deliverables:

- written tutorial, in markdown (.md) format:
 - with each step described clearly, and code blocks to include code examples.
 - see the `day8\_twitter\_bot.md` file in /class_notes folder for a sample of an .md file.
- virtual presentation, 15 - 20 minutes:
 - you will present the tutorial like a lesson, where you walk your classmates through the process of using the tool. You likely won't be able to explain the entire process in detail, so deliberately choose which section(s) you will focus on.

Examples:

- Yin, Piotr Sapiezynski and Leon. [Browser Automation](#), Blog.
- Instagrapi, [instagrapi tutorial](#), Youtube.
- [Make an Instagram Bot With Python](#), Geeks for Geeks
